

I have receives several e-mails in opposition and only 1 in favor
I will be sending the true copys of the E-mails to the commission
as soon as I can axcess my email at another site. The site was down
for the past few days, and axcess has been a problem, so as soon
as I can recover the hard copy I will submitt to the commission.

Comments filed both for and against this request are at best not
understanding of the pfoblem with Illegal Export CB type radios
being marketed at thousand of locations through out the United States, as well
as the marketing of GMRS [With FRS] channels
leading the public to think they can use 2 watts on FRS. The
issue is most "hams" want to "Squak" about Un-licensed operators
takeing over there frequencys, as well as the Licensed GMRS'ers
having un-licensed interference on there frequencys.

The fact that a number of "un-licensed" trasmitters are found
in the
"Broadcast" services AM, FM, and Short Wave, are found in fcc inspections, that
are not on the "air" with out a clear cut
ownership
tag is also the issue.

The commission in the past few years has found a number of "Bootleg"
remont site radios operations on various services.

Hams have again "made remarks" about the un-licensed radio operators
that cause trouble, but they also fail to address the issue of how
to stop it.

The chief idea in the proposed "RM" was to show proof of "Athority"
to operate. In the listed services.

The mfg's in the past had a self stick lable called a "FCC-452-C
REVISED" That came with the equipment for operations. In the old
Part 97.99 rules from 1970's the FCC stressed the use of this tag
on some mobile equipment.

I noticed on several WEB sites the "misrepresentation" of the original
request to the effect "Require Registration" witch is not in any
part of this issue of the "RM", and the comments stress "Required
Registration"! So this gets down to the "FACTS" as long as
Illegal or Illegal Used equipment is offered for sale, the
violators will want to hide there true ID.

A number of E-mails I received were on the at best "Strange" or
from people who wanted to make sure that they did not have there
true ID on some equipment they owned or operated.

Ownership tagging and proof of Athority to operate are every day
common pratices! Auto License Tag's, Showing ture ID to buy
tobacco or beer, ID at various check points for public buildings,
and the number of other plces we show ID to rent a vidio or check
out a book from the library!

A great number of comments were on QRZ about police stops of various
radio operators using there devices. In some cases the police took
the 2 way radios. Proff of the rite to operate may also stop this

illegal taking of radios! It may also get a few of the Illegal Opertors off the air also. Even the ARRL also had a brief pool about police [of Sorts] Harassment of radio operators. Hams {Amateur's} and [Commerical] are the only 2 class's that are required to hold proof in mobile/portable operation of a license!

The FCC is losing a lot of funds from un-licensed opertors that should be licensed in the "Business" Bands, as well as others Bands. Over the counter sale's of licensed equipment to people who will take there chances in not paying the fee's is a problem today.

A number of fillings stressed there is no problem's so it's not need. If you take a serious look at the FCC actions for each day you see a number of radio services under inquire from the "Great Lake's" Marine Treaty Violations, to a "Taco Stand" using business band radios to JAM a "Target Store" security manage

I guss that if the end user had the idea that he could be on some kind of "Data Base" he may not use his radios in a illegal operation. Even if the data base was held in the retail store only as this "RM" states. Most modern stores hold this kind of information on the client for warranty work, or credit card data. So this would not be a burden to most retail operations. The burden would be great for the vendors of Illegal or Un-Licensed [Illegal] equipment, and they would be subject to commission or police inspection!

Thanks for the "against" or the "for" comments filled getting the commission to act on a long standing problem with "un-traceable" radios in the "Wrong" hands may get the commission to draft new rules in the future.
